

Bespoke floor drain | HighLine Custom

BESPOKE | CUSTOMISED MODULAR LINE DRAIN SYSTEM, WHICH ARE LONGER THAN THE STANDARDISED MODELS

Bespoke is a customised modular line drain system that is manufactured to order. Modular line drains are customised in length and are therefore ideal for institutions, changing rooms and large bathrooms. Outlet units, frames and gratings are chosen from the standard range. This means that frames and gratings are placed end-to-end, making maintenance easy and manageable. There is an outlet unit per drain unit to ensure as high capacity and low construction height as possible.

Bespoke floor drain for mid-floor placement is available upon request.

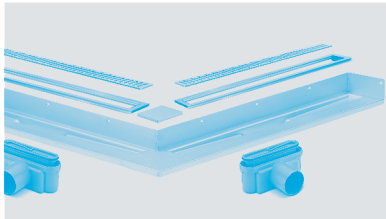

YOU CAN CALCULATE YOUR OWN BESPOKE LINE DRAIN SYSTEM

Enter your bathroom measurements
and choose your combination of modules.

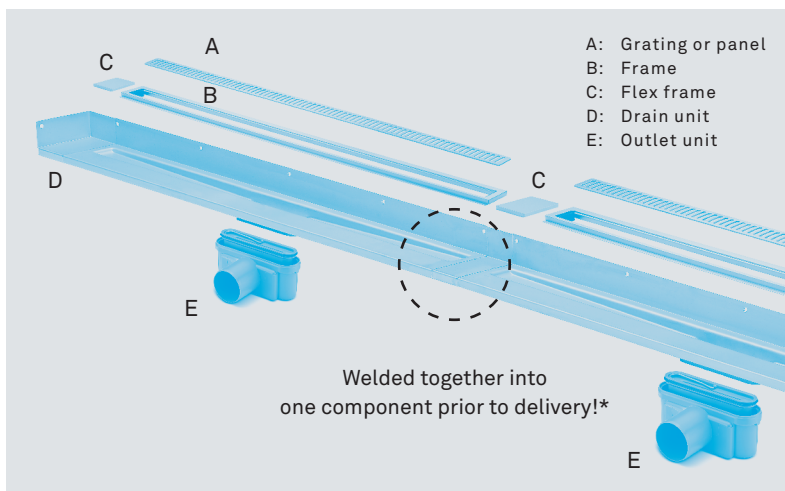

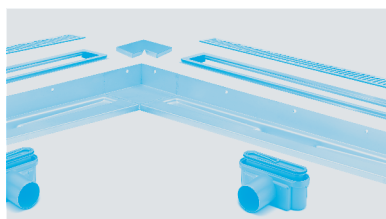

Add a ClassicLine or HighLine solution and an outlet unit.
Immediately view a design showing the specifications of your
individual line drain. Send your calculations to us
and we will prepare a quotation for you.

SKRÆDDERSYET KONSTRUKTION

TWO MODULES WITHOUT FLEX FRAMES

A modular line drain system that covers twice the length of a standard model when not extended with flex frames.

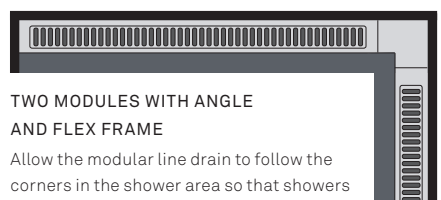

ONE MODULE WITH FLEX FRAMES

Maintain the vertical end flanges, even those with odd dimensions. Extra space can be filled out with flex frames at the sides.

TWO MODULES WITH FLEX FRAMES

If the modular line drain has odd measurements, the extra space can be filled out with symmetrically placed flex frames.

TWO MODULES WITH ANGLE AND FLEX FRAME

Allow the modular line drain to follow the corners in the shower area so that showers can be installed in several walls.
